

INTRODUCTION PROVENCE-ALPES-CÔTE D'AZUR DATA REGIONAL STRATEGY

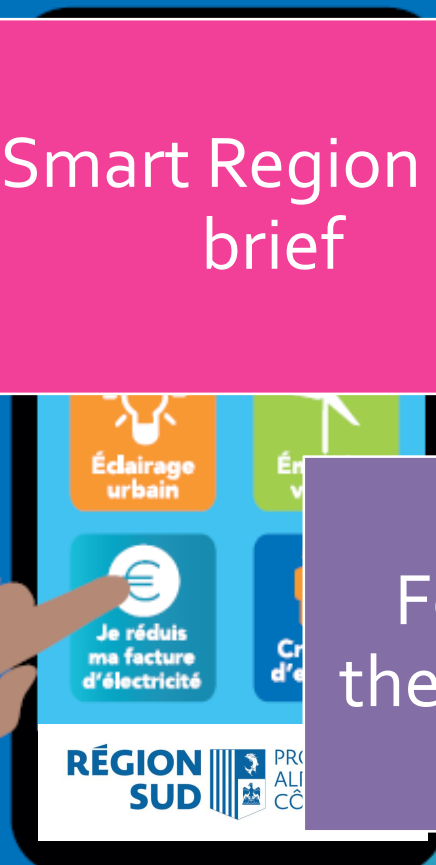

Smart Region in a
brief

The open and
smart data
regional strategy

Focus on DataSud

Focus on large
thematic datasets

Focus on Research
and Development
data projects

The five pillars of the Smart Region strategy

- I / Federate territories for an ambitious and balanced digital infrastructures deployment.
- II / The leading region in the openness of digital data, serving territories and innovation
- III / Making Provence-Alpes-Côte d'Azur the territory of digital experimentation
- IV / The Region is committed to innovative services, now and in the long term
- V / Digital divide, training and promotion of an ethical approach to digital innovation

INTRODUCING THE REGIONAL DATA STRATEGY

THE OPEN AND SMART DATA REGIONAL PROGRAM

The second pillar of the Smart Region strategy is entirely dedicated to digital data.
The open and smart data regional program is composed of 6 operational pillars

I. PUBLIC & PRIVATE DATA PARTNERSHIP PROGRAM
50 partners / 600 datasets / 700,000 downloads -> 2017.
A new partnership agreement & convention around 4 axes

II. DATASUD, the open, smart and geographic data regional platform (REGION & CRIGE paca)
Mutualizing a data platform, hosting, web services... at a regional level.

III. Open and smart data permanent call for projects
21 projects financed for a total amount of € 210,000 from 2016 to 2018.

IV. INDUSTRIALIZE THE OPENING OF MAJOR THEMATIC DATASETS
Transports, Energy, Tourism, Heritage and culture, Training ...

V. OPEN AND SMART DATA INTERNAL PROGRAM
Relaunch of the internal approach: go for an organization "data-centric",
Creation of a Datalab.

VI. PUBLIC-PRIVATE R&D DATA PROJECTS
Research and Development projects enhancing next generation of services in the field of energy and employment.
ORANGE / POLE EMPLOI / INRIA...

THE OPEN AND SMART DATA REGIONAL PROGRAM -> A PUBLIC & PRIVATE DATA PARTNERSHIP PROGRAM

THE OPEN AND SMART DATA REGIONAL PARTNERSHIP IS A PROGRAM OPEN TO PUBLIC AND PRIVATE ORGANIZATIONS

Axis 1 - Animate the network of data actors (public and private)

Axis 2 - Enable the publication and dissemination of data on DataSud platform

Axis 3 - Promote the deployment of new digital uses and services (challenges, call for projects...)

Axis 4: Provide partners with know-how, technical expertise and assistance in publication and dissemination of data

Around 50 partners are invested and publish their data on DataSud.

*

- Joining by signing a partnership agreement on open and smart data.

*

- Free service and accessible to all the communities of the regional territory.

*

- Mutualize, train and support territorial dynamics "data-centric"

THE OPEN AND SMART DATA REGIONAL PROGRAM -> A PUBLIC & PRIVATE DATA PARTNERSHIP PROGRAM

DATASUD : MUTUALIZING A DATA PLATFORM AT A REGIONAL LEVEL

Proposing a single entry for data at a regional level

Break silo approaches, disseminate open, geographic and smart data

Industrialize diffusion of multithematic datasets, augment data available for developers and startups

Public-private partnerships to serve the development of territories

Guarantee the sovereignty of data infrastructures

Mutualize a data platform, its hosting and its services

Produce common digital good. Platform & modules released in OpenSource

OPEN AND SMART DATA PERMANENT CALL FOR PROJECTS

The Region is one of the few territories at a national level to offer a public fund dedicated to support data projects. The framework of intervention and the permanent call for projects is called "open and smart data", voted in spring 2016.

The aim is to massify available data at a regional level and promote a data literacy, serving the common digital good and the development of new digital uses.

Open to the
public and private
sector.

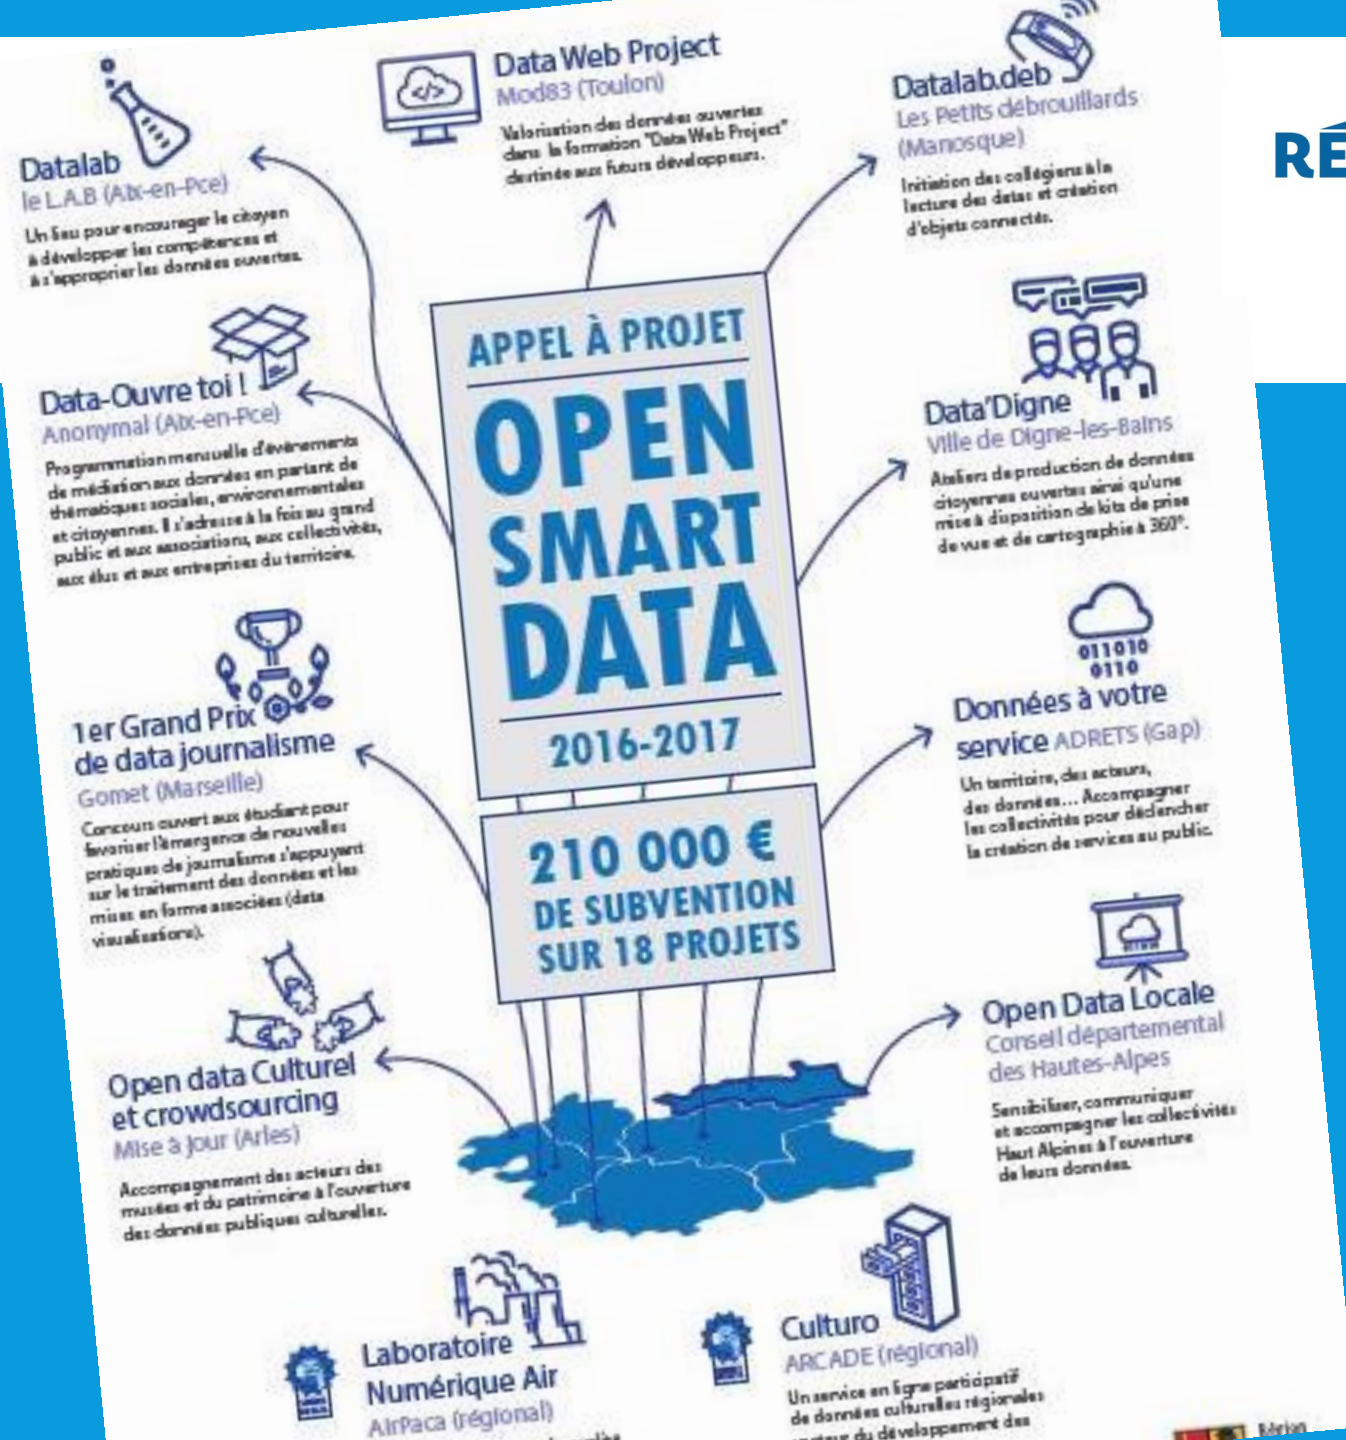

Theme A / Data
Infrastructures
with a ceiling of €
25,000.

Thematic: B /
Mediations with
data with a ceiling
of 10 000 €

LARGE THEMATICS DATASETS

Opening large thematic datasets homogenized at a regional level, with increased update frequency and web services to industrialize reuse services.

- Tourism datasets : APIDAE. Including hotels, places to visit, restaurants, activities. Opened in standardized formats, at a regional level, interpretable by a machine (API for data).
- RTE Eco2Mix real-time data flow, displaying the state of the regional power grid at the 20-minute time step.
- ATMOSUD, air quality at a regional level, standardized formats, interpretable by a machine, updated each hour.
- And also, agendas, regional enterprise directory, energy consumption, OPENSTREETMAP extractions...

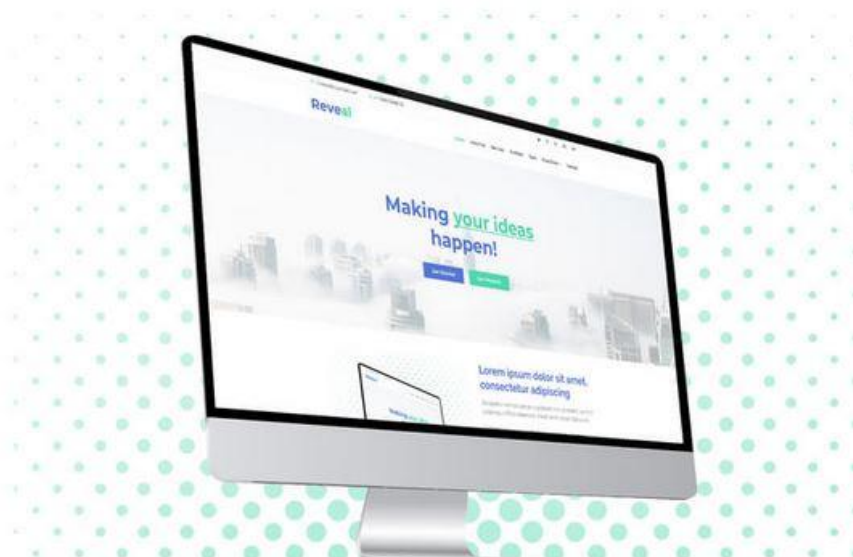

Transport datasets with all TER, MER and intercity bus opened by the Council. Inviting local transport aggregator to do so. Serialize extractions from "PACA Mobilité".

Employment and professional training data (regional catalog of the professional training offer) is also being consolidated for dissemination in OpenData.

FOCUS ON RESEARCH AND DEVELOPMENT DATA PROJECTS

FlexGRID Data

[Accueil](#)[Le projet](#)[Les objectifs](#)[Les cas d'usages](#)[Documentation technique](#) ▾[Contact](#)

La convention de Recherche et Développement

Une des actions transverses FlexGRID prévoit le déploiement d'une plateforme de données et services Énergies. En cohérence avec la stratégie Smart Région la Région Provence-Alpes-Côte d'Azur a privilégié le financement d'une première phase de Recherche et Développement. Le [rapport n°39179](#) du 7 juillet 2017 entérine la signature d'une convention de Recherche et Développement avec Orange.

✓ Chef de file : Région Provence-Alpes-Côte d'Azur

✓ Cheville ouvrière : Cap Energies.

✓ Maître d'œuvre : Consortium Orange.

Flexgrid *-> adressing smartgrids issues*

Selected by the government in 2016 after a national call for projects, FLEXGRID is a program of deployment of intelligent energy systems. It aims to deploy from 2017, a set of Smart Grids equipments and technologies at an industrial level, to boost the economic fabric and make the deployment area a showcase for the export of French know-how in terms of Smart Grids.

This deployment combines:

- Investments by network operators RTE and ENEDIS (Smart Grids base)
- Initiatives and investments from local authorities and companies,
- Support from the State and the South Provence-Alpes-Côte d'Azur Region.

FLEXGRID implements about 40 projects, which are as many sites of deployment of energy systems, calling on green production, energy efficiency, electric mobility on sites, smart cities or buildings, increasing the positive effects in terms of reducing carbon emissions and energy consumption through digitalization of energy networks.

RESEARCH AND DEVELOPMENT FOCUS ON FLEXGRID DATA

One of the transversal projects initially proposed in the global project was addressing data energy issues :

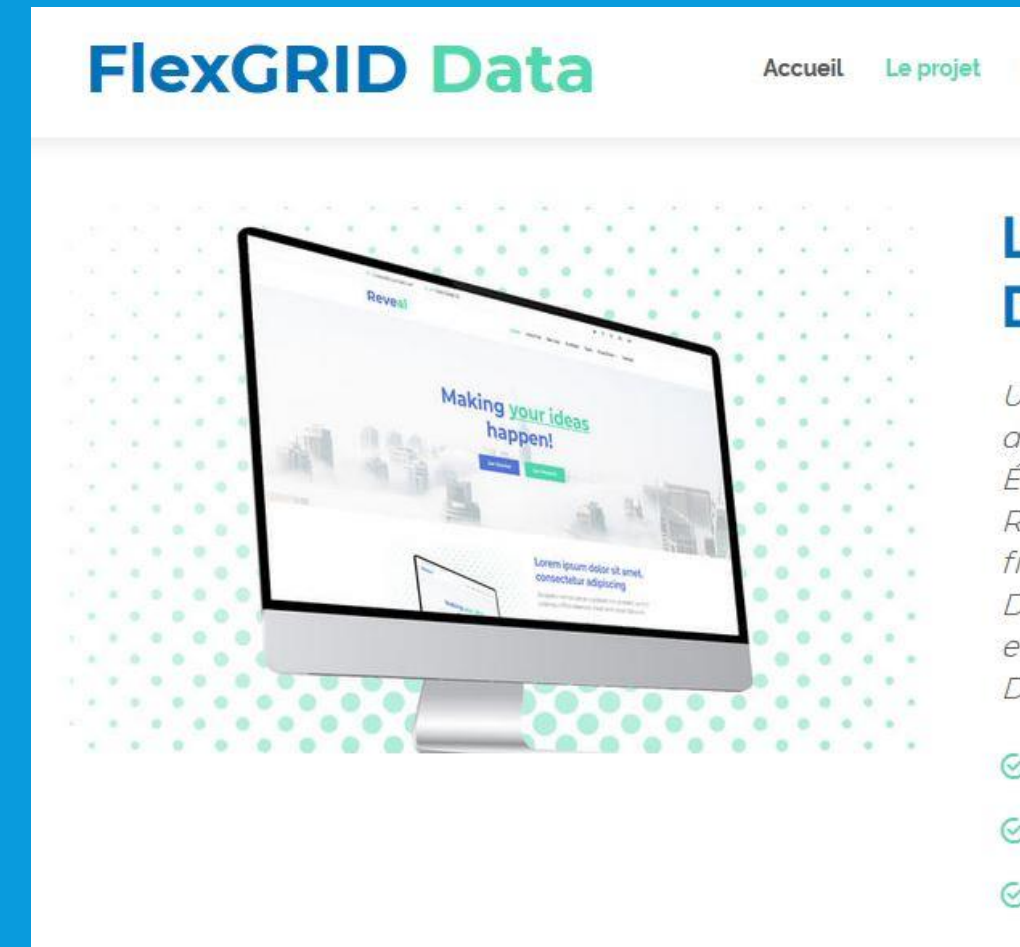

- Leader: Provence-Alpes-Côte d'Azur Region
- Expert: Cap Energies.
- Executor : Orange Consortium.

Actions planned:

A: Experimentation of shared governance and valorisation of REI data at regional level

B: A regional digital data platform (for energy) at the regional level

C: The development of SmartGrid services and activities

FOCUS ON FLEXGRID DATA R&D PROJECT

Which services to consider? What kind of legal structure should pilot such a platform? What are the economic models envisaged regarding data? What governance of private public data sharing?

In accordance with the Smart Region strategy, the Region favored financing a first phase of Research and Development.

Report n° 39179 of July 7, 2017 confirms the signature of a Research and Development agreement shared with Orange.

This legal arrangement is a first in the institution. The budget is 436 000 € HT (50/50).

Phase 1

- **R&D agreement**
- *Prefiguration study (legal, leader...)*

Phase 2

- *Create an dedicated organization*
- *Deploy a industrialized « data platform for energy » solution*

FOCUS ON FLEXGRID DATA R&D PROJECT

Why a R&D agreement ?

The french legal translation :

Application of Article 14, paragraph 3 of the Ordinance of 23 July 2015 related to public procurement :

Research and development projects, shared between public and private partners, make it possible to remove technical locks (through the design and experimental application of new solutions) and organizational barriers (for example in terms of trusted third parties, value) to provide the proof of concept needed for public demand and scaling up.

FOCUS ON FLEXGRID DATA R&D PROJECT

Goals

Experiment use cases of the future “industrial” data platform dedicated to energy

Help define the scope and the services offered by the future platform

Increase global awareness of the challenges faced by all actors in digitalizing energy

Outputs

A platform demonstrator

Six use cases

A hackathon

Source codes and documentation in common digital good (open)

FOCUS ON FLEXGRID DATA R&D PROJECT OUTPUTS AT THIS STAGE

First R&D project driven by the regional council.

Concrete acceleration of energy datasets opened through DataSud = Over 60 datasets opened thanks to / for use cases.

A demonstrator accessible online.

First use case accessible online : a territorial energetic dashboard allowing to analyze and compare the energy consumption and production of a territory using Big Data tools.

projects

Financing concrete
projects (22) to enhance
« data literacy »

* Each use case we are addressing with our projects conduct to the creation of one or more new hybrid dataset with multiple owners and licences issues.

NEXT IMPACTS OF DATA IN THE PUBLIC SPHERE

Public-private innovation: the public actor as trusted third party to experiment. (R & D contracts, PPP ...)

Citizen partnerships: to confront its data with the citizen knowledge to reinforce it, to increase it.

Strengthen initiatives of digital platforms (data) to produce new services (= state and territories platforms).

Negotiate reference data that are no longer the exclusive public: example Waze: 4 mns in advance by accident / Energies ...

Continue to protect the citizen: French and European legislative framework (RGPD, INSPIRE)

What role does the public actor play in the challenges of data?
Ensure a fair value capture between GAFAMs, SMEs and territories (Open Data is the best example / Transports)

THANK YOU ! DEBATE
