Other Site Characteristics

Area di elevato pregio paesaggistico, con numerose testimonianze geomorfologiche della glaciazione Wurmiana e numerose tipologie di carsismo superficiale e profondo.

4.2 Quality and importance

Il biotopo presenta un contingente floristico di grande interesse fitogeografico con una elevata presenza di specie endemiche e di specie rare compresa una stazione di Taxus baccata. Da segnalare la presenza di due endemismi appenninici tra gli Anfibi: Salamandrina terdigitata e Bombina pachypus. Presenza di invertebrati endemici e di alcune specie di Lepidotteri, oltre alla Callimorpha quadripunctaria (nec quadripunctata!), estremamente localizzati e minacciati di estinzione come Parnassius apollo e Erebia gorge carboncina limitata, sulle Alpi Apuane, al Monte Tambura.
