Other Site Characteristics

Area collinare accidentata con dirupi (balze) e calanchi argillosi e sabbiosi nella parte settentrionale, più dolce e con biancane nella parte meridionale.

4.2 Quality and importance

La vegetazione dell'area presenta alcune caratteristiche di peculiarità quali formazioni pioniere di Artemisia caerulescens ssp. cretacea. Da segnalare inoltre popolazioni di Arundo pliniana al limite settentrionale dell'areale. L'area è di grande importanza per la presenza accertata di Canis lupus e per la conservazione di specie ornitiche rare o minacciate legate ad habitat steppici naturali o semi-naturali; in particolare, di notevole interesse le popolazioni nidificanti di Burhinus oedicnemus, Lanius senator e Lanius minor; fra le numerose specie di rapaci presenti sono da segnalare Circus pygargus, Circaetus gallicus e presumibilmente Falco biarmicus, rarissimo in Toscana. Fra gli Anfibi sono prresenti il Triturus carnifex, specie endemica italiana e la Bombina pachypus, specie endemica dell'italia peninsulare.
